Introduction

The Implementation Plan is a set of actions and procedures necessary to achieve the goals and policies set forth in the San Diego County General Plan. The broad array of actions, strategies, and processes undertaken to implement the General Plan will help achieve the County's vision for its growth and development. These programs are a combination of existing County activities, processes, reports, assessments, and plans, as well as new programs that will be initiated upon adoption of the updated General Plan. These programs, generally described in this chapter, are presented in greater detail in the Implementation Plan, which is adopted by the Board of Supervisors separate from the General Plan to allow efficient updating as a means to improve implementation of the General Plan. As a freestanding document that is directly linked and cross-referenced to the General Plan, the County maintains the flexibility to regularly update the Implementation Plan without the necessity of amending the General Plan. This flexibility is important to the County as a means to address the changes that occur over time and that may affect the County's vision, the availability of funding for programs, and future tools and technology that may be used to implement the General Plan.

The Implementation Plan is designed to be a key resource for County staff in assuring that the goals and policies of the General Plan are reflected in day-to-day County operations and services including preparing plans and programs, reviewing development proposals, and maintaining infrastructure. The Implementation Plan can be used as a work program, a framework for preparing departmental budgets, or as a monitoring tool to assess annual

performance in achieving targeted goals for key implementation actions.

As mandated by State law, the Implementation Plan addresses specific actions required of the County including, but not limited to, the following key activities:

- Prepare an annual report on the status of the General Plan and progress of its implementation, as well as, its progress in meeting its regional housing needs allocation
- Prepare an annual capital improvement program for scheduling and financing major public works projects consistent with the General Plan
- Prepare an updated zoning code to achieve consistency of the zoning and development standards with the updated General Plan's land use designations and policies

In addition to these key State-mandated actions, the programs and activities presented address the major areas of planning and service delivery for the future growth and development within the County as outlined in Chapters 3 through 8 of the General Plan.

Implementation Plan Overview

Each policy in the General Plan includes one or more implementation programs to assure that there is a mechanism for its implementation. Overall, the goals and policies of the General Plan will be undertaken through these programs, which include a variety of programs and actions that are collectively referred to as the Implementation Plan. The Plan is presented in a matrix format that is organized into six categories, each of which contains subcategories that further refine and group programs into related

IMPLEMENTATION PLAN

areas and topics. The programs and actions include established and/or ongoing programs, as well as proposed new initiatives that must be developed by County staff and approved by the Board of Supervisors before being implemented. The broad categories of the Implementation Plan are briefly described below and include the following:

1. Long Range Land Use Planning
2. Built Environment
3. Housing
4. Mobility
5. Natural and Cultural Resources
6. Safety, Health, and Welfare

Each implementation program or action includes the following components:

- **Policy Reference.** Each General Plan policy is correlated to a specific action in the Implementation Plan. Cross referencing each action in the Implementation Plan to a specific policy, enables the Plan to be revised as policies change or as new tools and methods for implementation are developed.
- **Responsible Department.** The lead County department with primary responsibility for completion of a program is listed. If additional departments or external agencies provide key support to implement the program, that entity is also indicated.
- **Program Implementation Category.** This information provides more detail regarding whether the action is a new or existing program and whether or not additional resources are needed to implement the action specified. The Program Implementation categories are identified below:

A-1: Current Program/No Change

A-2: Current Program/Change/Additional resources NOT required

A-3: Current Program/Change/Additional resources required

B-1: New Program/Additional resources NOT required

B-2: New Program/Additional resources required

A “Change” to a current program is defined as a formal action that would be required, such as a change to an ordinance or Board of Supervisors policy. “No Change” indicates that no modifications or revisions to the current program would be required.

- **EIR Mitigation**—Identifies the necessary actions to mitigate environmental impacts that may result from the General Plan update.
- **Timeframe**—The timeline for the initiation or completion of programs is only an estimated timeframe and may not occur within the timeframe indicated due to budget or resource constraints. Timeframes are provided in periodic increments, as well as notations indicating whether that the program is annual or ongoing.

Below is a summary of the key tools used within the six major categories of implementation programs. The County of San Diego will use these key tools and other actions to implement the goals and policies of the General Plan. The County Implementation Plan provides a comprehensive listing of the programs and actions that will implement the County’s General Plan.

Long-Range Land Use Planning

Regional Planning. These programs relate to the long range planning efforts undertaken by the County, including coordination

IMPLEMENTATION PLAN

of planning activities with federal, State, regional, or local entities or County-led planning efforts.

Planning in the Unincorporated County. These plans include County actions to implement the General Plan as well as annual monitoring and amendments to the Plan, as necessary. These actions include annual review of the General Plan as required by State law to document progress in its implementation. This annual review provides a mechanism to identify critical areas of concern regarding the General Plan's validity as a policy document to direct the County's vision and its future development, and will inform its consideration of proposed General Plan amendments.

Community Plans. Community Plans, adopted as part of the General Plan, are plans specifically created to address the issues, community character, and visions of the distinct communities in unincorporated County areas. Community plans provide a framework for addressing the critical issues and concerns that are unique to a community and are not reflected in the broader policies of the General Plan.

Built Environment

These programs and actions relate to management of the physical development that sustains growth and economic vitality, and provides public services within the County. Such programs and actions include discretionary development review and other community development activities such as parks and recreation, public buildings, infrastructure, solid waste, and paleontological resources / unique geologic features.

Site Design of Discretionary Development—Many General Plan policies are implemented through the County's police power to protect public health, safety, and welfare. They are also implemented through the development review process, which applies to both public and private development projects. The County uses a combination of departmental procedures, Board policies, ordinances, and other regulations to review development projects. These tools allow the County to assess proposed development projects and approve, deny, or condition projects based on their consistency with the General Plan.

Zoning Ordinance—The County's Zoning Ordinance is one of the primary means of implementing the General Plan. Adoption of the updated General Plan necessitates a thorough review of Zoning Ordinance regulations pertaining to land use, density/intensity, design and development, resource conservation, and public safety. This review assures that the Zoning Ordinance is consistent with the updated General Plan, as required by State statutes, which also requires that consistency be achieved "within a reasonable time." The courts have found that this generally infers a one- to two-year time period.

Specific Plans—Specific plans are tools for the systematic implementation of the General Plan and are intended to implement and regulate land use and development within a specific project boundary, subject to the substantive and procedural requirements of State law. Specific plans are adopted by ordinance and, to date, have been incorporated into the San Diego County Zoning Code. Therefore, all development standards contained therein are enforceable by law.

IMPLEMENTATION PLAN

Subdivision Regulations—The Subdivision Ordinance regulates the design and improvement of subdivisions, requires dedications of public improvements, establishes development impact fees and mitigation programs, and requires conformity with the provisions of the County’s General Plan. This includes the review and approval of lot size and configuration, street alignments, street grades and widths, traffic access, drainage and sanitary facilities, lands dedicated for public uses (e.g., schools, parks, and trails) and open spaces, and other measures as may be necessary to insure consistency with or implementation of the General Plan.

Design Guidelines—The County of San Diego requires an architectural review of development site and building plans, elevations, signage for new and rehabilitated buildings or structures to assure compatibility with adjoining structures and uses. The review also ensures compatibility in scale and quality, a high level of character and quality, contribution to a vital, pedestrian-oriented environment, and compatibility with natural landscapes and environmental setting. The County has established Design Review Boards for the communities of Alpine, Lakeside, Julian, Ramona, and Valley Center and within the I-15 Corridor area.

Environmental Analysis (*California Environmental Quality Act*)—A program Environmental Impact Report (EIR) was prepared and certified for the updated General Plan in accordance with the procedural and substantive requirements of the *California Environmental Quality Act* (CEQA). It may serve as a reference in the preparation of CEQA-required environmental documents for subsequent Specific Plans, capital improvements, and other actions that are consistent with the General Plan. Through the development review process, the County will assess a project’s compliance with

the program General Plan EIR and determine whether additional or supplemental analysis is required prior to project approval.

In addition to the tools discussed above, the Implementation Plan includes actions that address parks and recreation facilities, public buildings, infrastructure, and solid waste.

Housing

The Housing Element differs from the other General Plan elements in that many of the programs which implement the Housing Element are required by State housing law. They address affordable and special needs housing, financial assistance, and the reduction of government constraints related to affordable housing. In addition to required programs, implementation of the Element also includes long-range programs to guide development planning beyond the horizon of the current housing cycle.

In the County, responsibility for the administration of these programs is shared by two primary departments: County Department of Housing and Community Development and Planning & Development Services. The Housing Element programs serve two purposes. The short-term programs are intended to fulfill State law requirements and address current housing needs as determined for the Regional Housing Needs Assessment cycle.

Mobility

These programs address maintenance, improvement, and development of a comprehensive multi-modal transportation network for the unincorporated County areas, such as the regional network of freeways, State highways, and transit systems; the

IMPLEMENTATION PLAN

County public and private road network; parking; and bicycle, pedestrian, and trail networks and facilities that are needed to sustain projected growth and development within the County. The Mobility Element road network provides a guide for the construction of future roads to accommodate development in accordance with the General Plan Land Use Map. The Mobility Element road network requires new development to reserve rights-of-way and to construct portions of the road, as appropriate. A General Plan amendment is required to change the network.

The County Public Road Standards determine the specific road design according to the classification assigned in the General Plan. In addition to the General Plan road network, the County has adopted master plans, strategies, and programs that address other components of the Mobility Element. These plans are prepared to provide more specific direction for County decision-makers, staff, and the public on how the General Plan will be implemented. The following is a partial list of master plans, strategies, and programs that the County has adopted. The implementation programs for each of these plans calls for periodic review and update to address changes in these systems over time. The County's master plans and programs include, but are not limited to, the following:

- Bicycle Transportation Plan
- Community Trails Master Plans
- Fallbrook Airport Master Plan
- Ramona Roads Master Plan

Natural and Cultural Resources

These programs and actions implement policies that seek to protect, conserve, and sustain the County's natural and cultural

resources, including biological habitat, water, agricultural lands, minerals, open space, air quality, cultural, paleontological, and visual.

Biological, Water, Agricultural, Air, Open Space, and Mineral Resources—This Plan includes resource conservation tools to regulate new development to ensure the protection of natural resources. Some of the more frequently used programs and ordinances include the following:

- *Multiple Species Conservation Program (MSCP)*—A plan to conserve habitat for endangered species.
- *Resource Protection Ordinance*—Places special controls on development to protect the County's wetlands, floodplains, steep slopes, and sensitive biological habitats.
- *Biological Mitigation Ordinance*—Protects the County's biological resources and prevents their degradation and loss by guiding development outside of biological resource core areas, and by establishing mitigation standards for discretionary projects.
- *Groundwater Ordinance*—Establishes regulations for the protection, preservation, and maintenance of this resource by ensuring that development will not occur in groundwater-dependent areas of the County unless adequate and sustainable groundwater supplies are available.
- *Watershed Protection Ordinance*—Provides regulations that protect water resources and improve water quality by reducing the adverse effects of polluted run-off discharges.

County Guidelines for Determining Significance—These Guidelines provide consistent, objective, and predictable evaluation of significant effects of discretionary development on the physical environment and are used to review discretionary projects to

IMPLEMENTATION PLAN

evaluate whether any adverse environmental effects may result from the project. Unique guidelines were developed to protect and preserve the following natural resources: agriculture, air, biological, groundwater, hydrology, minerals, and surface water. In addition, the Guidelines address protection and preservation of paleontological, cultural and visual resources.

Low Impact Development (LID) Program—The goal of the County’s LID Program is to protect water quality by preserving and mimicking nature through the use of stormwater planning and management techniques on a project site. Improvements in stormwater management have been made in the County since 2001 with the passing of the first Stormwater Municipal Permit. Additional stormwater improvements are now required as defined in the revised Stormwater Municipal Permit in 2007.

Safety, Health, and Welfare

These program actions relate to policies that promote human health, safety, and welfare. This section addresses potential safety hazards and mitigation, including fire and flood protection, geologic hazards, law enforcement, and airport hazards. In addition, this chapter addresses health and welfare issues such as climate change, noise attenuation, and the preservation of cultural and visual resources.

Tools in this section include Hazard Mitigation, Disaster Preparedness, and Emergency Response for Geologic, Flood, Fire, Hazardous Materials, and Law Enforcement, Noise, and Cultural Resources as well as policies that address Climate Change and the County’s visual resources. These tools include but are not limited to the following codes and guidelines.

Building and Fire Codes—Building construction in the County is regulated by the California Building Code, Uniform Mechanical Code, Uniform Plumbing Code, National Electrical Code, and the California Fire Code. The General Plan policies also provide for the continuation of opportunities for “Build Green” techniques as specified in the County’s Green Building Program.

County Guidelines for Determining Significance—These guidelines provide consistent, objective, and predictable evaluation of significant effects of discretionary development on the physical environment and are used to review discretionary projects to evaluate whether any adverse environmental effects may result from the project. The Guidelines provide direction for evaluating adverse environmental effects that a proposed project might have on safety concerns such as wildland fires, flooding, geologic hazards, airport hazards, and emergency response and evacuation plans. In addition, the Guidelines address health and welfare issues such as noise attenuation.
